Pool Summary

- In May, producer milk was 2.1 billion pounds, down 14.5% daily from April, but more than twice the May 2021 volume. The changes reflect differences in the estimated volume of milk not pooled.
- Class I use was 198 million pounds, down 5% daily from April and 2.5% below last year. In May, Class I use was 9.5% of total producer milk.
- The May 2022 Producer Price Differential (PPD) was \$0.13 per cwt.
- The F.O. 30 Statistical Uniform Price in May was a record high \$25.34 per cwt., up \$0.79 from April and \$7.82 above last year.
- Market statistics for May are shown on Pages 4 and 5.

Measures of Growth in Federal Milk Orders*

Total producer milk pooled in the 11 Federal milk orders in 2021 was 136.8 billion pounds from 23,292 dairy producers. Total receipts were 0.7% lower than they were in 2020. The number of pooled producers was 6.5% lower than in 2020.

Producer milk used in Class I in 2021 was 30.8%, down from 31.8% in 2020.

The average daily delivery of milk per producer was 6.4% higher compared to 2020.

In 2021, milk marketed through Federal orders accounted for 61% of all milk produced in the United States.

The graph below depicts the volume of producer milk for 1947 through 2021, along with the percentage of Class I use in all Federal orders.

The numbers used in the graph are also shown in the table on Page 3, for selected years, during that same time period covering more than 70 years.

Beginning in 1990, due to disadvantageous price situations in some orders, handlers elected not to pool milk that normally would have been associated with the order. This has reduced, sometimes substantially, the volume of producer milk and number of producers reported for some markets.

During the time period, the number of producers rose from about 136,000 in 1947 to more than 190,000 in 1961, and then steadily declined to the current level of about 23,000.

As the uniform milk price (blend) has climbed through the years, peaking at

\$23.54 in 2014, the total value of the pool has continued to rise as well. Of course the increasing volume of producer milk is a large factor in that rise.

Producer milk in 2021 is nearly 10 times more than it was in 1947, but the value of that producer milk is nearly 35 times higher. Even more significant is the value of the milk for each producer, which jumped nearly 200 times, as the number of producers fell and producer milk went up.
