## Dairy Prices Down in July, Above Last Year

**C**heese and butter prices on July 21 on the Chicago Mercantile Exchange (CME), as well as nonfat dry milk, were down from June, but higher than last year, as shown in **Figure 1** on Page 2.

Historically, all of the CME prices remain at high levels, with prices to dairy farmers also historically high as well. While this doesn't consider costs, only pay prices, **Table 1** on Page 2 shows what the average Federal order producer's minimum pay price was the last four months, all at more than \$24 per cwt.

The CME barrel price on July 21 for cheddar cheese was \$1.96 per pound, down 21¢ from June 21, but 58¾¢ above last year. Meanwhile, the 40-pound block price for cheddar cheese on the CME on July 21 was \$1.91 per pound, down 19¢ from last month, but 38¾¢ above a year ago.

The CME butter price on July 21 was \$2.92½ per pound, down fractionally from last month, but \$1.19¾ above last year. The butter price has been above \$2.90 most of June and July, peaking at \$3.00 twice. It has also been above \$2.50 virtually all of 2022, an unprecedented run of prices at that level. The record high price is \$3.13½.

The July 21 price for nonfat dry milk (NFD) on the CME was \$1.68¾ per

pound, down 12¼¢ from May 16, but 45¢ above last year. NFD has been on a downward trend since early June, after generally being up most of the last three years.

The CME whey price on July 21 was \$0.45½ per pound, down 5¼¢ from last month and 7¾¢ below last year. The whey price has been on a downward trend since early February, and like NFD, reversed direction from its general upward trend of the last two years.

The Federal order Class III price for June is \$24.33, down \$0.88 from the record high set in May, but \$7.12 above a year ago.

The July 21 CME Class III futures market has the price declining to \$22.54 for July, and staying between \$20 and \$21 through the rest of 2022.

## Pool Summary

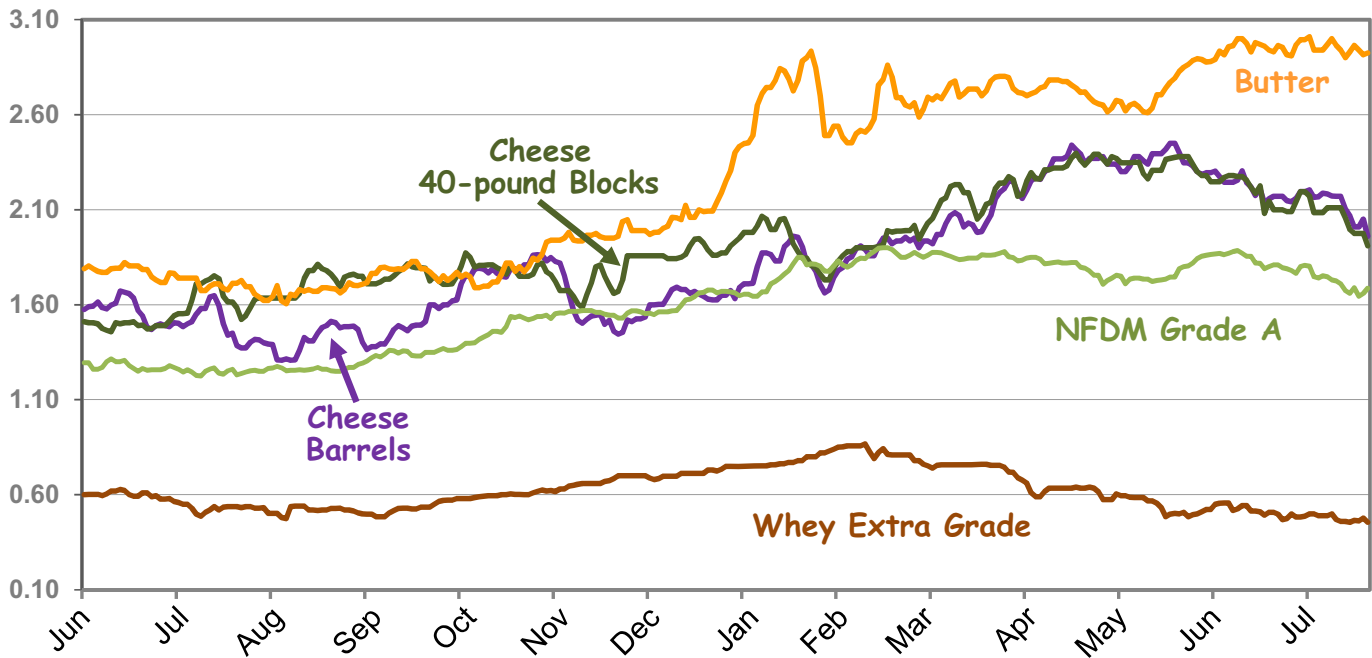

- In June, producer milk was 2.5 billion pounds, up 24% daily from May and nearly double the June 2021 volume. The changes reflect differences in the estimated volume of milk not pooled.
- Class I use was a record low 164 million pounds, down 14% daily from May and 13% below last year. In June, Class I use was 6.6% of total producer milk.
- The June 2022 Producer Price Differential (PPD) was \$0.30 per cwt.
- The F.O. 30 Statistical Uniform Price in June was \$24.63 per cwt., down \$0.71 from May, but \$7.25 above last year.
- Market statistics for June are shown on Pages 4 and 5.

\* The somatic cell (SC) payment rate is calculated by subtracting the cell count (in thousands) from 350, and multiplying the result by the SC adjustment rate, rounding to nearest full cent. For March, in this example, that is: [(350-170) x \$0.00103] or 180 x \$0.00080 = \$0.19. For April the SC adjustment rate is \$0.00115 resulting in a \$0.21 rate. For May the SC adjustment rate is \$0.00121, resulting in a \$0.22 rate. For June the SC adjustment rate is \$0.00117, resulting in a \$0.21 rate.

## Supply Plant Systems

Supply plants are defined in §1030.6, with performance requirements defined in §1030.7(c). In general, supply plants are required to ship 4.5% of their receipts to bottling plants, as revised on August 1, 2022. These performance requirements can be met as a “system”, as defined in §1030.7(f).

This provision allows two or more supply plants operated by one or more handlers to qualify for pooling by meeting the shipping requirements in the same manner as a single plant. In other words, an individual plant in a system does not need to qualify on its own, as long as the system as a whole qualifies.

Supply plants in a system must be located in the marketing area.

The following supply plants requested system pooling for the period of August 2022 through July 2023. The only supply plant system in the coming year was formed by Central Milk Producers Cooperative.
